PHILIPPINE STARTUP CHALLENGE
The Next Frontier of Filipino Innovation

EVALUATION AND FEEDBACK FORM

TEAM INFORMATION	
Team Name	SIPAT LABS
Startup Name	SEEPAT
School	ILOILO STATE UNIVERSITY OF FISHERIES SCIENCE AND TECHNOLOGY - DINGLE CAMPUS

FEEDBACK BY CRITERION	
CRITERIA	**COMMENTS**
Business Model	The project offers free access, ₱99 PRO, and ₱199 NEGOSYO subscriptions, along with institutional licenses. The ₱150,000 budget adds up. However, the relatively low subscription prices mean the business will need a large number of paying users to generate sufficient revenue. The team should provide a revenue projection based on realistic adoption rates.
Innovativeness	Voice-first bookkeeping that helps Filipino microbusiness owners understand questions like “Nasaan ang puhunan ko?” offers a fresh, user-friendly approach. The team's acknowledgment of existing platforms like Peddlr and Packworks also shows awareness of the competition.
Technological Viability	The project is at the prototyping stage, with designs and architecture but no working MVP. Separating calculations from AI is a sensible approach, while converting Taglish speech into accurate transactions remains the main technical challenge.
Social Impact and Relevance	Could help sari-sari stores and micro-vendors better track profit, credit sales, and working capital. Its broad potential reach supports SDGs 8 and 10.

GENERAL COMMENTS AND SUGGESTIONS	
Strength	The problem is clearly framed in the local language, and the competitor analysis is balanced and honest. The proposal sets measurable targets of 95% accuracy and 80% task completion while keeping the budget lean.
Things to Improve	Conduct customer interviews and present the findings. Build a voice-capture demo that handles two or three common transactions, and include a revenue projection and a proposed pilot location.

Note: *The comments and suggestions are summarized feedback given by the DICT screening committee.*
